Requirement for budgetary information on the North Korean Ministry of
National Defense
25X1A2g

REF : [REDACTED]

Background

The report referenced above provides information on North Korean military economics of considerable value to OHR. Known intelligence has been corroborated, at least in certain areas, for example, the rank pay of both enlisted men and officers, and the procedures for salary payments depicted in paragraph 30, including signature of recipient and format of payroll. Also the rather complete list of rations, food and clothing, for enlisted men and officers filled a specific gap on intelligence.

OHR has definitely established that the North Korean Defense Budget is a modified parallel of the defense budget of the USSR. The financial accounting and reporting procedures and regulations used in North Korea are likewise patterned after the Soviet system. Hence, any further detailed information in the field of North Korean military economics can be used against the major target -- the USSR.

Further information is desired particularly with regard to the questions listed below and such information would be regarded by OHR as "of special importance." If this information is not available from the present source, it is requested that these requirements be levied on other sources.

Paragraph 27 of this report provides the collector with an excellent target list. In the event that higher echelons cannot be penetrated, it is desirable to penetrate the division and/or regimental echelon as suggested in paragraph 27 subcategory 4 of the report. Armored, artillery and airforce units are particularly important and deserve special attention.
